REGULATING YOUR ROOM’S TEMPERATURE

New and renovated residence halls are heated and cooled by a system that controls the whole building. If you are in this style of residence hall, you will see a thermostat on the wall of your room that can be seasonally adjusted. For example, during the summer months, you can adjust the temperature up or down but you cannot turn on the heat. During the winter months, you can adjust the temperature up or down a bit but not turn on the air conditioning.

If your HVAC system has stopped working you may place an online work request to have the system repaired.

SET POINT RANGE IS ONLY 70-75 DEGREES

To adjust the set point (temperature) in your room, you must:

- Adjust the temperature by using the up and down arrows. You can only set it from 70 - 75 degrees when using heat or air conditioning.
